

Final tests before launch

Everything that changed in the app, explained in plain language, and what to try before launch. Organised by topic — no need to understand how it works under the hood, just follow each checklist.

How to use this guide

This document is split into **5 topics**. Each change has a short explanation of what changed and a checklist of what to test. You don't need to test everything in one go — it can be split across several days. If something doesn't behave as described, or something described here doesn't exist in the version you're testing, note the device/browser used and, if possible, take a screenshot.

A **Trips**

Seeing participants on the map, reordering stops, ".pt" navigation, personal calendar, and the Guided Tour (camera, speed, trip video).

B **Profile and Social**

New profile with categories and tabs, Nearby Adventurers, and mobile-specific fixes.

C **Search, Map and Location**

Search more tolerant of typos, new locations inside municipalities, and several small navigation fixes.

D **Content and Photos**

New photos for districts/municipalities, removal of Peaks/Mountains, and fixes to duplicate places/photos.

E **Guide Accounts**

New dedicated profile for Guide-type accounts.

Topic A

7 CHANGES TO TEST

Trips

Participants on the map, stop reordering, ".pt" navigation, personal calendar, and the Guided Tour.

Seeing other trip participants on the map

When opening the map of a shared trip, besides the trip's places, it's now also possible to see, in real time, where the other participants are — and where the current user is — each one with their profile photo on a marker, visible even when a place is open on top.

WHAT TO TEST

- ☐ Open a shared trip with at least 2 participants and go into "View on map".
- ☐ Confirm that a marker with each participant's profile photo appears, including your own.
- ☐ Open a place's detail on the map and confirm the participant markers stay visible on top, not hidden behind.
- ☐ Confirm only trip participants can see this information.

Reordering the stops of a trip

The "**Optimize stop order**" button, in the Itinerary of an already-created trip, now works. It recalculates the best order to visit the chosen places and reorganises them across the trip's days, never reducing the number of days (only extending it if truly necessary).

WHAT TO TEST

- ☐ In an already-created trip with several stops, go to the Itinerary and use "Optimize stop order".
- ☐ Confirm a confirmation prompt appears before applying, and that the order/days only change after confirming.
- ☐ Confirm distance, duration and the trip map update on their own with the new order.
- ☐ If the trip had the Guided Tour manually set up, confirm it now follows the new order.

".pt" navigation in a place's Directions

When asking for directions to a place, besides the options to open Google Maps/Waze/Apple Maps, there's now a **".pt"** option that opens a visual navigation inside the app itself — a van following the real route to the destination, with the map rotating to follow the direction of travel, an arrow and distance to the next turn, and a button to recentre if the map is moved manually.

WHAT TO TEST

- ☐ From a place, ask for Directions and choose the ".pt" option.
- ☐ Confirm the van appears at the real (GPS) position and only moves when the position actually changes.
- ☐ Confirm the map rotates according to the direction of travel, and that the turn arrow and distance appear and advance correctly along the way.
- ☐ Drag the map manually and confirm a button appears to recentre on the van.
- ☐ Leave the planned route (e.g. turn onto another street) and confirm the app detects it and recalculates.
- ☐ End the navigation and confirm everything returns to normal.

A4 · TRIPS

Personal Calendar / "Remind me"

It's now possible to save, on a chosen date, any place (event, restaurant, attraction, etc.) or an entire trip, into a personal calendar inside the app — just for the user's own reminder, with no link to any external calendar.

WHAT TO TEST

- ☐ On a place, use the "+" button and choose "Add to calendar", picking a date (and, optionally, a note).
- ☐ On a trip, use the "..." menu and choose "Add to calendar" — pick the start date and confirm the trip's days are distributed correctly.
- ☐ Open "My Calendar" from the Profile and confirm entries appear grouped by date, with an option to edit or remove.
- ☐ Remove a trip's calendar entry and confirm it removes all of that trip's days at once, without leaving loose days behind.

Guided Tour — the camera no longer follows the road

When playing the Guided Tour, the camera now moves **directly** from one stop to the next — zooming out, moving, zooming in — instead of following the real shape of the road between the two places. **"View on map" is unchanged** — it still shows the real route by road.

WHAT TO TEST

- ☐ Start the Guided Tour on a trip with several stops and confirm the camera moves smoothly and directly between each stop and the next.
- ☐ Check that the map appears loaded during the movement, with no black or blank areas.
- ☐ Separately, tap "View on map" on the same trip and confirm it still shows the real route by road, as before.

Guided Tour — faster startup on large trips

Trips with many stops used to take a while to start the Guided Tour. Now only what's needed to start immediately gets prepared, and the rest gets prepared as the trip progresses.

WHAT TO TEST

- ☐ Pick (or create) a trip with as many stops as possible.
- ☐ Start the Guided Tour and confirm it starts quickly, without a long wait before the first image appears.
- ☐ Let the trip run to the end and confirm there are no long pauses or black/blank screens, even towards the end.

Guided Tour — the "Record" button now generates a trip video

The "Record" button, before starting the Guided Tour, no longer records the screen of the user's own phone/computer (it never worked well on phones anyway). Now, pressing "Record" requests a video of the trip to be prepared on the other end — it takes some time, and the video becomes available to watch and download once it's ready.

WHAT TO TEST

- ☐ On the Guided Tour prep screen (before "Start Tour"), press "Record" and confirm some indication appears that the request was made.
- ☐ Wait (it may take a few minutes) and confirm the video eventually appears ready to watch.
- ☐ Test specifically on a phone: confirm it works the same way and **does not ask for any screen-sharing permission**.
- ☐ Play and download the video, confirming it matches the right trip, with the right stops.

Topic B

3 CHANGES TO TEST

Profile and Social

Redesigned profile, Nearby Adventurers, and mobile-specific fixes.

New Profile — categories and tabs

The profile (own and other people's) was redesigned with a cover photo, and a new "Overview" area showing favourite places grouped by category (Castles, Beaches, Museums, etc.), each with a real, representative photo. It now has 4 tabs — **Overview, Trips, Favourites and Friends** — all with real content inside the profile itself. The content is always the same for anyone viewing it; only the available actions change depending on whether it's the profile owner or not.

WHAT TO TEST

- ☐ Open your own profile and confirm the cover photo, avatar, name and the 4 tabs.
- ☐ In "Overview", confirm category cards with real photos, and that "View all" expands correctly if there are more.
- ☐ In the "Trips"/"Favourites"/"Friends" tabs, confirm real content (without leaving to another screen) and that tapping an item leads to the right place.
- ☐ Open someone else's profile and confirm it shows exactly the same information, just without the private actions (edit profile, calendar, settings, log out) — those should only appear on your own profile.
- ☐ From another person's "Friends" tab, open a friend-of-theirs' profile and confirm you can go back without getting lost in the navigation.
- ☐ Confirm "[Name]'s places" shows public cards, with no manage option, on someone else's profile.

Nearby Adventurers

Three issues fixed: mutual discovery between nearby users (you need "Show me to nearby adventurers" turned on to appear to others); the profile opened from here now shows the full information (including category percentages); and the friend button moved to the top-right corner, switching to a message icon once you're already friends.

WHAT TO TEST

- ☐ With two test accounts, confirm they only appear to each other if both have "Show me" turned on.
- ☐ Open someone's profile from here and confirm it shows the full information, same as the regular profile.
- ☐ Confirm the top-right button shows "Add friend" when not yet friends, and a message icon once you are.
- ☐ Confirm the same behaviour directly in the "Nearby Adventurers" list, without needing to open the profile.

Mobile — avatar, notifications and sharing

The avatar at the top now shows the real photo; a friend-request notification stopped reappearing after being marked as read; and the share screen stopped being hidden behind the bottom menu. A more general problem was also fixed: an invisible element was "stealing" taps meant for any notification, including accept/decline friend request buttons and "mark all as read".

WHAT TO TEST (ON A REAL PHONE)

- ☐ Confirm the avatar at the top shows the real profile photo.
- ☐ Accept a friend request, mark it as read, leave and return to the app — confirm the notification doesn't reappear on its own.
- ☐ Open several different notifications and confirm they all respond to taps, including accept/decline friend requests and "mark all as read".
- ☐ Open a place's share screen and confirm it shows in full, without being covered by the bottom menu.

Topic C

7 CHANGES TO TEST

Search, Map and Location

More tolerant search, new internal locations, and small map navigation fixes.

Search always finds the right place

Before, if the category/district filter was wrong (or there was a spelling mistake), search could return "no results" even when the place existed — or show results from some unrelated place. Now, when a filtered search finds nothing, the app automatically tries the same text search ignoring the filter, and finally tolerates small spelling mistakes.

WHAT TO TEST

- ☐ Search for a place with the category or district filter deliberately wrong — confirm the right result still shows up.
- ☐ Type a name with a small spelling mistake and confirm search still finds the right place.
- ☐ Search specific names like "Castelo de Montemor-o-Novo" or "Pego do Inferno" and confirm exactly that place shows up, not results from other districts.
- ☐ Search just "Lisboa" and confirm the disambiguation list (District/Municipality/other related results) still appears.
- ☐ Search a small village and confirm it doesn't appear duplicated in the list.

Locations inside a Municipality (Villages, Parishes, Hamlets, Settlements)

Besides Municipalities, it's now possible to search and open thousands of smaller locations inside them, each with its own label (e.g. "VILLAGE", "PARISH") and, in many cases, its own photo and information.

WHAT TO TEST

- ☐ Search the name of a small village or parish and confirm it opens with the correct label and a marker/circle on the map.
- ☐ Open a Municipality and confirm it shows a "Locations" list with the correct number of internal locations.
- ☐ From a location, go back (especially on mobile) and confirm it returns to the Municipality, not straight to the general map.

Searching a District/Municipality opens its detail screen

Choosing a District or Municipality in search now opens the full detail screen directly, exactly as already happened when tapping the territory on the map.

WHAT TO TEST

- ☐ Search the name of a district and of a municipality and confirm both open the full detail screen.
- ☐ Close the detail screen and confirm the map's filter/state stays as expected.

"Nearby places" on a place's screen

Tapping one of the "nearby places" shown at the bottom of a place's screen now always makes the new place's screen appear starting from the top.

WHAT TO TEST

Open a place, scroll down to "Nearby places", tap one and confirm the new screen appears starting from the top.

A place's "Location" shows the most specific place available

When more detailed information was missing, the "Location" field repeated the same text as the "District" field right above it. Now, when available, it shows the Municipality (more specific) before falling back to the District.

WHAT TO TEST

- ☐ Open several places without a detailed address and confirm "Location" shows something more specific than "District", instead of the same repeated text.

"View on map" closes when navigating elsewhere

The "View on map" screen (for a trip or favourites) now closes automatically when switching sections or using "Explore Around Me", instead of staying active behind the scenes.

WHAT TO TEST

- ☐ Open "View on map" on a trip or favourites, navigate to another section (or tap "Explore Around Me") and confirm it closes on its own.

Automatic location and clearer permission messages

The user's location now updates on its own when opening/resuming the app, without depending on the button. The "go to my location" button also now distinguishes a genuinely denied permission from a temporary network/GPS issue, instead of always showing the same generic message — which used to also make the app incorrectly assume location had been permanently denied (for example, always skipping the distance question in the trip-creation wizard).

WHAT TO TEST

- ☐ With permission granted, confirm location updates without tapping any button.
- ☐ Deny location permission, tap "my location" and confirm a clear message appears telling you to enable it in permissions.
- ☐ With location "undecided" (never answered), confirm the app asks for permission normally.
- ☐ In the trip-creation wizard, confirm the distance question is only skipped when location was genuinely denied, not because of a temporary error.

Topic D

3 CHANGES TO TEST

Content and Photos

New photos for districts and municipalities, removal of Peaks/Mountains, and fixes to duplicate places/photos.

District and Municipality photos

The cover and gallery photos of all 20 Districts and 308 Municipalities were reviewed one by one — images unrelated to the place were replaced with real, representative photos, and galleries now have up to 20 photos (up from just 2 to 6), loading faster and more smoothly.

WHAT TO TEST

- ☐ Open several Districts and Municipalities (including the Azores and Madeira) and confirm the cover photo and gallery show the real place, with no unrelated images.
- ☐ Scroll through a District/Municipality gallery with several photos and confirm it swipes smoothly and quickly, with no long waits.

Peaks and Mountains no longer appear as visitable places

Places of type "Peak"/"Mountain" (which represented just the summit itself, not a visitable place) no longer exist in the app. In some cases, a peak's photo was reused for a nearby viewpoint or trail that didn't have any photo yet.

WHAT TO TEST

- ☐ Confirm it's no longer possible to find (by search or on the map) standalone Peak/Mountain places.
- ☐ Open a few mountain viewpoints/trails and confirm they have a cover photo that makes sense for the place.

Duplicate places and photos fixed

A few duplicate places (the same spot appearing twice) and a few photos that, by mistake, showed another place's image or appeared repeated, were found and fixed.

WHAT TO TEST

- ☐ When searching well-known places, confirm there are no obvious duplicates (same name, very close to each other).
- ☐ At "Pego do Inferno" (Portalegre) and nearby, confirm the photos show the right place.

Topic E

1 CHANGE TO TEST

Guide Accounts

New dedicated profile for Guide-type accounts — only relevant with a Guide account available.

Guide Profile

"Guide"-type accounts now have their own, more complete profile — territories they operate in, languages spoken, specialties, style and experience/credentials — visible on the profile and in the Friends→Guides section.

WHAT TO TEST (ONLY WITH A GUIDE ACCOUNT AVAILABLE)

- ☐ Fill in/edit the Guide profile (territories, languages, specialties, style, experience) and confirm the data is saved.
 - ☐ Switch the account type and confirm the filled-in Guide profile data is preserved.
 - ☐ Confirm the Guide profile shows up correctly in the Friends→Guides section.
-

End of guide. Any behaviour different from what's described, or anything described here that doesn't exist in the version being tested, should be reported in as much detail as possible: device, browser, and exactly where it happened.
